

Vincent Lam

IAM & Security Engineering | AI Agents & LLM Security | Open to remote

Sacramento, CA | v812.io@gmail.com | xeoul.github.io | github.com/Xeoul | linkedin.com/in/vincentlam812

Security-focused engineer (B.S. Computer Science, 2025) who builds identity and AI-agent systems: just-in-time access with policy-as-code, LLM tool use with structured outputs, and defenses against prompt injection. Brings 2+ years of compliance- and accuracy-critical records work for the State of California.

SKILLS

Identity & access: IAM, least privilege, ABAC/RBAC, joiner/mover/leaver, access reviews, OAuth 2.0/OIDC, JWT, AWS IAM & STS

AI & agents: Claude API, tool use, structured outputs, prompt engineering, prompt injection defense, Pydantic / Zod

Security: STRIDE threat modeling, NIST 800-53 / SOC 2 mapping, audit logging, detection rules, SIEM (OCSF), CodeQL, Bandit

Languages & tools: Python, TypeScript, JavaScript, SQL, Java, R, FastAPI, Next.js, React, Docker, GitHub Actions, Power Automate

PROJECTS (2026)

Aegis – Just-in-time access platform | Python, FastAPI, Cedar, AWS STS, Claude API

[Live demo](#) | [Code](#)

- Built an access platform with zero standing privilege: Cedar policies decide each request on real user and resource attributes, high-risk access needs a second approver, and grants are provisioned as short-lived, scoped AWS STS credentials.
- Kept the LLM out of access decisions: the prompt and output schema limit Claude to extracting fields, prompt injection detection sends manipulated requests to a human, and adversarial tests simulate a hijacked model.
- Enforced time-boxed grants (2–72 hours by sensitivity, 1-hour break-glass) revoked on expiry and joiner/mover/leaver changes; built an HMAC-chained audit log, 6 detection rules, OCSF SIEM export and access-certification reports.
- Reached 92% coverage with 111 tests gated in CI by CodeQL, Bandit, mypy and pip-audit; wrote a STRIDE threat model and NIST 800-53 / SOC 2 / ISO 27001 control map.

Installous – AI stock research agent | TypeScript, Next.js, Claude API

[Code](#)

- Developed a tool-using Claude advisor that calls Zod-validated tools for live quotes, fundamentals and news, sharing a per-data-type cache (1–60 min) with the app so follow-ups never refetch.
- Launched a rules-only \$100k paper-trading fund that trades its five-factor score of ~50 large caps every 30 minutes via GitHub Actions, logging every trade's reason to a public history benchmarked against SPY.

Privacy Blocker – Local-first data-broker opt-out tool | JavaScript, Web Crypto, GitHub Actions

[Live demo](#)

- Encrypted all personal data in the browser (PBKDF2-SHA256, 600k iterations, then AES-256-GCM) with a 10-minute idle lock; a CSP of connect-src 'none' blocks all outbound data.
- Automated CCPA deletion requests to ~25 brokers per run via a scheduled GitHub Actions job that logs no personal data.

W.E.M.U 2.0 – Senior project, team of 8, for the CA Dept. of Consumer Affairs | Node.js, Selenium

- Co-built a form-migration system for 3.4M licenses across 36 entities; owned the production stage and contact forms page, plus Selenium tests for role-based access.

EXPERIENCE

Office of Legislative Counsel – Office Technician (Typing)

Sep 2026 – Present

- Produce and publish legislation in specialized document-workflow systems on a 5-person team, delivering final documents through secure channels.

California Department of Health Care Services

Student Assistant – Public Hospital Redirection Payments & Veterans Homes Programs

Jan 2025 – Jun 2025

- Validated and reconciled hundreds of claims and financial reports per recurring cycle from state hospitals and providers for state and federal reimbursement programs, resolving discrepancies with fiscal and policy stakeholders before payment release.

Student Assistant – SharePoint Program & Records Support

Nov 2022 – Apr 2024

- Created the program's SharePoint landing page, the hub for finding liaisons and other authorized contacts through the Outlook Global Address List and emailing them, with permissions limiting access to designated staff.
- Helped develop a Power Automate flow that replaced the manual monthly, quarterly and annual sends of linked documents to the corresponding contacts.
- Resolved user access issues, broken links and version conflicts on department-wide SharePoint, and ran QA for accuracy, metadata and accessibility compliance.

California Housing Finance Agency – Student Assistant, Loan Operations & Data Quality

May 2022 – Oct 2022

- Added features to 3+ existing Python and R data-validation scripts to speed up loan-data review.

EDUCATION

California State University, Sacramento – B.S. Computer Science

Aug 2025

Coursework: Computer System Attacks & Countermeasures, Computer Networks, Operating Systems, Databases, Data Mining
